EXPLORATION STAGE			PRODUCTION STAGE
Satellite data	Satellite data	Seismic data	Ultrasound
Rex Gravity	Rex Seepage	Rex Virtual Drilling	Rexonics technology
			

DYNAMIC TOPOGRAPHY MEASUREMENT USING SATELLITES

Based on satellite gravity data

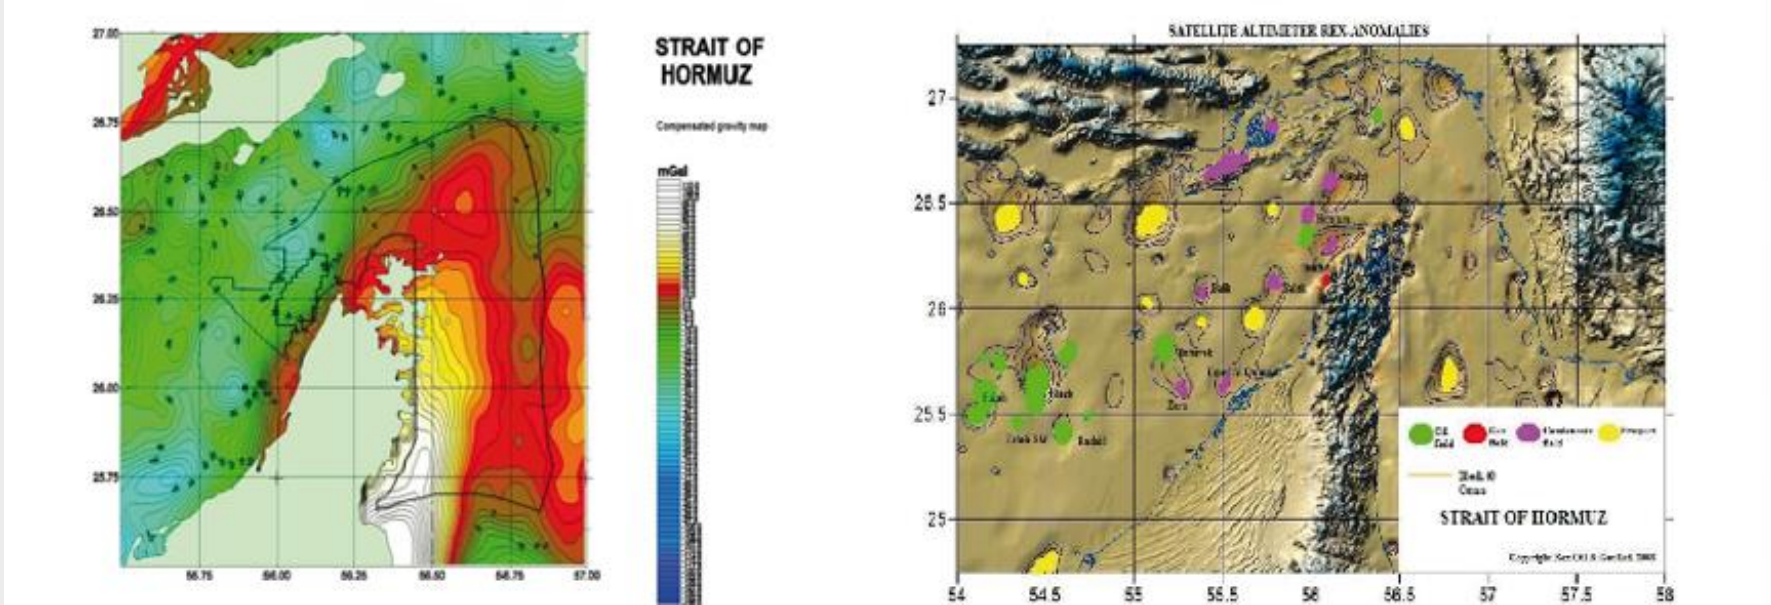

Water depth compensation

High correlation with known hydrocarbon accumulations

Highly cost efficient

The Rex Technologies are developed and fully owned by Rex Technology Management Ltd.

COMPARISON: TRADITIONAL vs REX

Traditional satellite chart

Presence of hydrocarbons more well defined with Rex Gravity

ADVANCED OFFSHORE SEEPAGE MEASUREMENTS

Based on thermal imaging

Advanced analysis of sea surface temperature. An analysis of the thermal infrared spectrum emitted from the top (<0.1mm) ocean layer

A thin oil layer will absorb and emit solar energy differently than water without oil sheen. Part of the energy will be emitted in the infrared (IR) wavelength region. The emissivity of water and oil is different dependent on time-of-observation (day and night)

The Rex Technologies are developed and fully owned by Rex Technology Management Ltd.

COMPARISON: TRADITIONAL vs REX

Traditional photo image of oil slicks

Chart using Rex Seepage

OFFSHORE COLLECTION OF SEISMIC DATA USED IN REX VIRTUAL DRILLING (“RVD”)

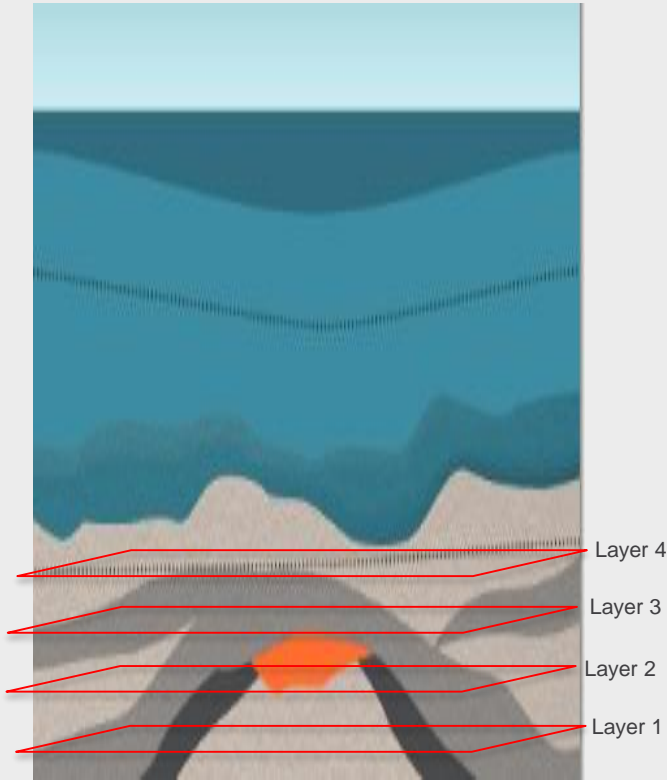

Detects the presence of hydrocarbon accumulations as well as migration paths

Provides information about fluid type (oil/brine)

Provides volumetric reserve information

Works on both offshore and onshore seismic data

The Rex Technologies are developed and fully owned by Rex Technology Management Ltd.
